📋 Daily Activity & Progress Report: October 4, 2026

Date: October 4, 2026 (2026-10-04)

Project: KSS-PROCUREMENT-OS

Role: Full Stack Development / System Engineering

Report Type: Daily Work Audit & Performance Log

Timezone: Indian Standard Time (IST, UTC+05:30)

📌 Executive Summary & Key Highlights

On **October 4, 2026**, engineering operations focused on high-priority defect resolution and workflow isolation across the **Manager**, **Finance**, and **Vendor** portals.

⏱️ Key Daily Metrics

- **Total Prompts / Development Cycles:** 27 verified iterations
- **Active Working Hours: 5.6 Hours** (Across a 16.1-Hour operational span: 12:02 AM – 04:11 PM IST)

- **Codebase Files Modified:** 42 files across frontend React components and backend Django DRF endpoints
- **Core Modules Touched:** `RaiseTicketPage.tsx`, `ManagerDataContext.tsx`, `VendorPortalPages.tsx`, `views.py`, `serializers.py`, `models.py`, `client.ts`
- **Branch Safety:** Safety backups generated; read-only query simulations conducted on `fix-raise-ticket-requisitions`.

🕑 Chronological Shift Breakdown

🌙 Shift 1: Midnight Ticket Verification Decoupling (12:02 AM – 12:33 AM IST)

- **12:02 AM – 12:33 AM IST:**
  - * **Issue Addressed:** In **Manager Portal ➔ Raise Ticket**, uploaded documents were showing as *"Already Verified"* prematurely.
  - * **Resolution:** Traced status leakage to quotation receipt states. Decoupled ticket verification state from vendor receipt APIs, ensuring explicit manager review is required.

🌞 Shift 2: Midday Workflow & API Resilience (11:27 AM – 01:25 PM IST)

- **11:27 AM IST:**
  - * **Mock Payment 400 Bad Request Fix:** Resolved HTTP 400 Bad Request exception during mock payment execution in Manager Raise Ticket.
- **11:34 AM – 11:48 AM IST:**

- * **Software Request Renewal Workflow Audit:** Analyzed the end-to-end software renewal lifecycle before applying modifications, verifying stage progression from Team Lead to Manager.

- **12:03 PM IST:**
  - * **Vendor Portal PO Verification Defect:** Fixed an automated bug where Purchase Orders in the Vendor Portal were automatically displaying *"Documents Verified"* immediately after vendor dispatch.
- **12:17 PM – 12:46 PM IST:**
  - * **Finance Portal RFQ & Vendor Quotations Sync:** Resolved an issue in **Finance Portal ➔ Vendor Quotations** where RFQs were displaying *"0 Vendors Quoted"* and *"Total Bids Received: 0"* despite valid quotation submissions from multiple vendors.
- **01:24 PM – 01:25 PM IST:**
  - * **Database Migration & Timestamping:** Applied schema migration `0006_goodsreceipt_verified_at_and_more.py` to record explicit verification timestamps on goods receipts.

🌤️ Shift 3: Afternoon Stability, Requisition De-duplication & Filtering (01:58 PM – 04:11 PM IST)

- **02:04 PM IST:**
  - * **HTTP 500 Server Error Hotfix:** Resolved internal server errors on `/api/procurement/receipts/`, `/api/payments/`, and `/api/invoices/` caused by unhandled query exceptions in `views.py`.
- **02:40 PM IST:**
  - * **Disappearing Requisition & Card De-duplication:**

  - **Problem:** Request `"testing request 41"` disappeared from the Raise Ticket list after vendor selection, while existing requests showed duplicate cards (`TCK-SW-REQ-...` vs `TCK-...`).

  - **Resolution:** Re-included valid intermediate procurement stages in the Raise Ticket selection query and implemented client-side de-duplication by request ID.

- **02:53 PM IST:**

- * **Data Preservation & Safety Backup:** Created physical database safety backup `backend/db.sqlite3.backup_20261004_145355` before applying query fixes.

- **02:59 PM – 03:09 PM IST:**
  - * **Hardware vs. Software Requisition Separation:**

  - Enforced strict category filtering in the Raise Ticket selection queue: Hardware requisitions route to physical GRN and ticket processing, while Software items follow license renewal paths.

- **04:04 PM – 04:11 PM IST:**
  - * **Vendor Quotation Data Propagation:** Fixed vendor quotation payload delivery to ensure complete bid details appear dynamically in the review portal without latency.

📊 Summary Deliverables Matrix: October 4, 2026

Area / Module	Identified Defect	Implemented Solution	Status
Manager Portal	Ticket documents auto-verified prematurely	Decoupled verification flags from vendor quotes	**COMPLETED**
Vendor Portal	POs auto-marked as "Documents Verified"	Bound verification to manager GRN approval	**COMPLETED**
Finance Portal	RFQ list showing "0 Vendors Quoted"	Unified quotation serialization & vendor mapping	**COMPLETED**
API Backend	500 errors on receipts, invoices, payments	Fixed unhandled query exceptions in Django DRF	**COMPLETED**
Raise Ticket Flow	Requisitions disappearing &	Added intermediate stage support & ID de-duplication	**COMPLETED**

	duplicate cards		
Data Safety	Preservation of existing transactional data	100% data preservation; zero deletions / drops	**COMPLETED**
